 [README.md](#)

This project is the main backend service for the cockpit-ui.

- Development: <https://cockpit.dev.go-plattform.at/>

This project uses NSwag to auto-generate client code from OpenAPI specifications for external service connectors. The generation targets are currently commented out in the `.csproj` file but can be enabled when client code needs to be regenerated.

Generates client code for the BPP File service integration.

To regenerate the client code, uncomment the following target in `BPP.Backend.NET.App.csproj`:

```
<Target Name="NSwagBppFile" BeforeTargets="PrepareForBuild"
  Condition="'$(Configuration)' == 'Debug'">
  <Exec ConsoleToMSBuild="true" ContinueOnError="true"
    WorkingDirectory="$(MSBuildProjectDirectory)"
    Command="$(NSwagExe_Net90) run Connectors/BppFileConnector/nswag-bpp-file.json
/variables:Configuration=$(Configuration)">
    <Output TaskParameter="ExitCode" PropertyName="NSwagBppFileExitCode" />
    <Output TaskParameter="ConsoleOutput" PropertyName="NSwagBppFileOutput" />
```
